

LUCAS SILVA.

PYTHON & AI DEVELOPER · SIEMENS · LISBON

Software developer building AI products at Siemens, where I am at the forefront of my department's AI initiatives as **one of its key AI experts and main point of contact on AI**. MSc in Computer Science focused on artificial intelligence (FCUL), with experience across machine learning, back-end and front-end development, and data engineering.

EXPERIENCE

Python & AI Developer · Siemens, Lisbon

Apr 2024 – Present

AI payment mapping

Built an AI tool that maps incoming payments to invoices using a classifier together with a retrieval model. It gives the system more valuable match proposals and further reduces the need for manual work.

Python · Azure · TensorFlow · PyTorch · SQL

Pension investment insights application

Back-end and front-end development of an application that gives insight into pension investments through graphs and different views of the data, supporting better decisions. Responsible for the application's security and management.

Python · Django

AI initiatives

Driving the department's AI initiatives; a key expert and the main point of contact on AI.

Data Engineer · KPMG, Lisbon

Sep 2022 – 2024

Advisory, Technology Consulting. Built ETL and analytics workflows with Python, SQL and Alteryx. Alteryx Foundation and Core certified; Microsoft Azure Fundamentals (AZ-900).

Researcher · LASIGE, FCUL

2021 – 2022

FCT research scholarship. Deep learning for predicting ALS disease progression; presented as a poster at the 7th LASIGE Workshop, 2022.

Sales Assistant · Worten

Sep 2018 – Oct 2019

EDUCATION

MSc Computer Science and Engineering, AI · FCUL

2020 – 2022

Thesis: Deep Learning for Predicting Disease Progression of Clinical Endpoints in ALS. Final grade 16/20.

BSc Computer Science and Engineering · ULHT

2017 – 2020

Final grade 14/20.

SELECTED PROJECTS

ALS progression with deep learning

MLP, CNN and LSTM models predicting clinical endpoints from temporal patient data.

Asteroids with evolved networks

A genetic algorithm evolves neural networks that learn to play Asteroids.

Diabetic retinopathy with CNNs

Image preprocessing and a CNN for binary and 0–4 grade classification. TensorFlow, Keras.

Parallel temporal feature extraction

A parallel algorithm that aggregates features quickly for fraud-detection data.
